

ServoSoft – Size Complete Servo Systems

ServoSoft is an engineering software tool that sizes complete servo systems - not just a motor and inverter, but all components of a servo system including rotary and linear motors, gear motors, gearboxes, couplings, infeed, capacitor and bleeder modules, drives, inverters, cables, breakers and filters.

Benefits

- Design better products in less time
- Ideal for rapid prototyping
- Mechanical and electrical designers work together
- Get the design right the first time
- Accurately model the entire system
- Know and understand all performance margins
- Quick and easy scenario analysis
- Accelerate learning curve:
 - A 3-year design level in less than 1 year
 - A 5-year design level in 2-3 years
- Optimize design for:
 - Initial cost
 - Lifetime operating costs
 - Balance of initial and operating costs

Key Features

- Size all components
 - Motors (rotary and linear)
 - Gear Motors
 - Gearboxes
 - Couplings
 - Drives/Inverters
 - Infeed Modules
 - Capacitor Modules
 - Bleeder Modules
- Up to 20 axes in a project
- Shared Bus or Stand Alone Configurations
- 14 Drive Mechanisms
- Create any motion sequence with dynamic load
- Generic model, i.e. not limited to specific products
- Wizard walks users through entire sizing process

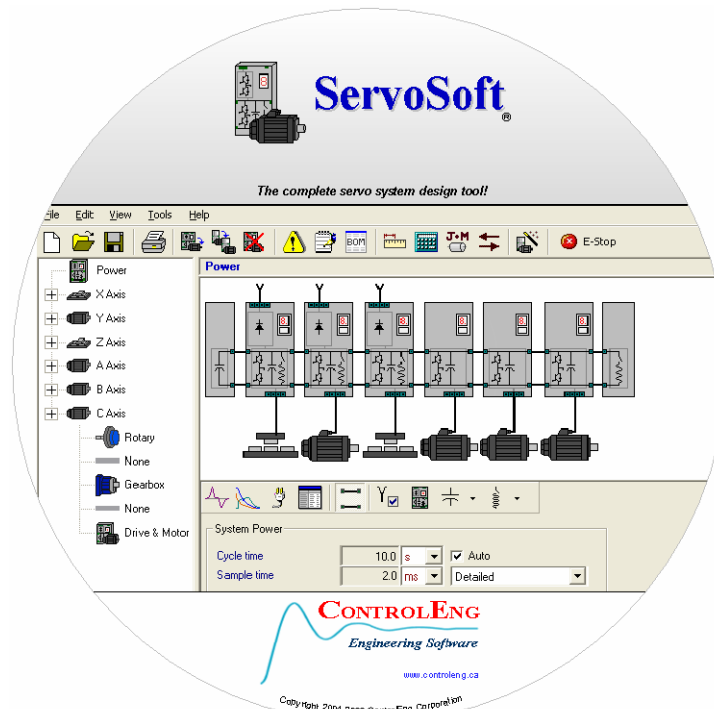

Target Users

ServoSoft is the must-have tool for OEMs, robot and machine builders, servo system vendors and application engineers that work with servo systems. Because ServoSoft sizes complete systems, mechanical, electrical, software and mechatronics engineers work together, with everyone working from the same project file. No more sending design parameters back and forth between mechanical and electrical engineers, with potential for errors and miscommunication. With ServoSoft, design teams work together, and learn to speak each other's language.

The Question Everyone Asks

Question: Other companies give their sizing software away for free.
ServoSoft costs hundreds of dollars for one license.
Is ServoSoft really that good?

Answer: Yes.
But there is only one way for you to see ServoSoft's ease-of-use and powerful features.
Try the ServoSoft Trial Version for 30-days.
